The Intel Xeon Scalable:

Intel® Xeon®
PLATINUM

Intel® Xeon® GOLD

Intel® Xeon® SILVER

Intel® Xeon® BRONZE

- 31XX Series Bronze (2 Socket)**
- Up to 8 cores
 - 2S configuration
 - **Improved core interconnect (UPI)** over past gen
 - **48 PCIe 3.0 lanes**
 - **Intel® AVX-512** feature enabled
 - **Standard RAS** features

Entry Performance and security for price sensitive deployments

- 41XX Series Silver (2 Socket)**
- + Up to 12 cores
 - + 2S configuration with **Improved Memory channel performance**
 - + **Intel® Turbo Boost Technology** for higher frequency capability
 - + **Intel® HT Technology** for hyper threaded workloads

Efficient Performance at Low Power. Provides more horsepower for single purpose workloads

- 61XX Series Gold (2 and 4 Socket)**
- + Up to 22 Cores
 - + **Added 3rd UPI link** for increased dataflow across cores
 - + Increased performance across memory channels⁶
 - + **Intel® AVX-512 with additional FMA**
 - + **Added Node Controller Support** to assist in scaled node management

- 51XX Series Gold (2 and 4 Socket)**
- + Up to 14 cores
 - + Supports **2S and 4S configuration** for increased scalability
 - + Increased core interconnect speed to boost data flow in multi-processor workloads
 - + **Advanced RAS** features

Mainstream Performance, Fast Memory, More Interconnect Engines, Advanced Reliability

- 81XX Series Platinum (2, 4, and 8 Socket)**
- + Up to 28 Cores
 - + **2,4, or 8 socket configurations** for best performance and scalability⁵
 - + **Topline memory channel performance** (1.5 TB memory bandwidth on select SKUs)
 - + **3 UPI links option across 2S,4S,8S** for improved scalability and inter-core data flow

The Best Performance, Scalability, Core options, and all Hardware-Enhanced Security features for the most robust capability

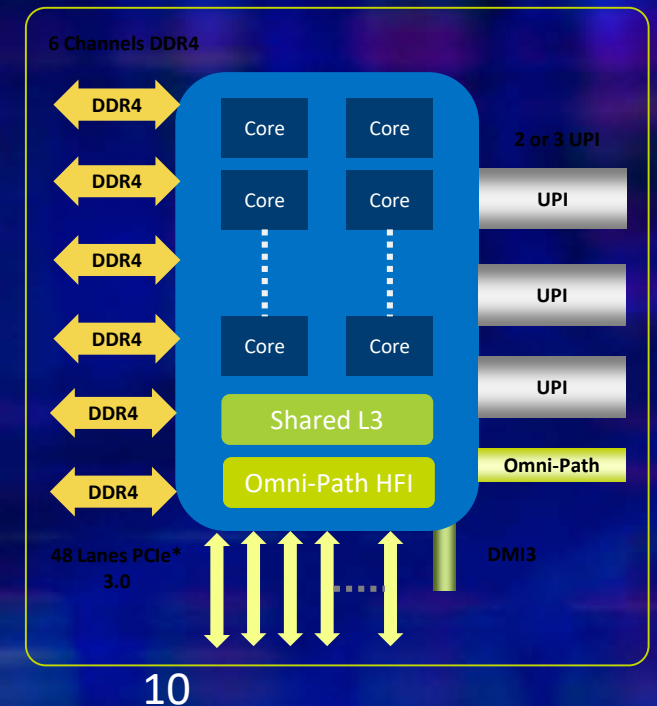

Better performance, interconnectivity, scalability, and memory

Intel® Xeon® Scalable Processor

Re-architected from the Ground Up

- Skylake core microarchitecture, with data center specific enhancements
- Intel® AVX-512 with 32 DP flops per core
- Data center optimized cache hierarchy – 1MB L2 per core, non-inclusive L3
- New mesh interconnect architecture
- Enhanced memory subsystem
- Modular IO with integrated devices
- New Intel® Ultra Path Interconnect (Intel® UPI)
- Intel® Speed Shift Technology
- Security & Virtualization enhancements (MBE, PPK, MPX)
- Optional Integrated Intel® Omni-Path Fabric (Intel® OPA)

Features	Intel® Xeon® Processor E5-2600 v4	Intel® Xeon® Scalable Processor
Cores Per Socket	Up to 22	Up to 28
Threads Per Socket	Up to 44 threads	Up to 56 threads
Last-level Cache (LLC)	Up to 55 MB	Up to 38.5 MB (non-inclusive)
QPI/UPI Speed (GT/s)	2x QPI channels @ 9.6 GT/s	Up to 3x UPI @ 10.4 GT/s
PCIe* Lanes/Controllers/Speed(GT/s)	40 / 10 / PCIe* 3.0 (2.5, 5, 8 GT/s)	48 / 12 / PCIe 3.0 (2.5, 5, 8 GT/s)
Memory Population	4 channels of up to 3 RDIMMs, LRDIMMs, or 3DS LRDIMMs	6 channels of up to 2 RDIMMs, LRDIMMs, or 3DS LRDIMMs
Max Memory Speed	Up to 2400	Up to 2666
TDP (W)	55W-145W	70W-205W

Re-Architected L2 & L3 Cache Hierarchy

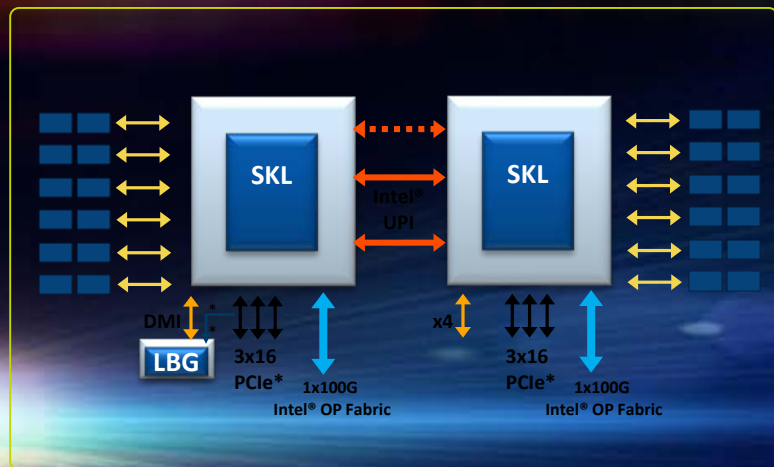

- On-chip cache balance shifted from shared-distributed (prior architectures) to private-local (Skylake architecture):
 - Shared-distributed → shared-distributed L3 is primary cache
 - Private-local → private L2 becomes primary cache with shared L3 used as overflow cache
- Shared L3 changed from inclusive to non-inclusive:
 - Inclusive (prior architectures) → L3 has copies of all lines in L2
 - Non-inclusive (Skylake architecture) → lines in L2 **may not** exist in L3

Skylake-SP cache hierarchy architected specifically for Data center use case

Software and workloads used in performance tests may have been optimized for performance only on Intel microprocessors. Performance tests, such as SYSmark and MobileMark, are measured using specific computer systems, components, software, operations and functions. Any change to any of those factors may cause the results to vary. You should consult other information and performance tests to assist you in fully evaluating your contemplated purchases, including the performance of that product when combined with other products. For more complete information visit <http://www.intel.com/performance>.

1. Platform: 2S Intel® Xeon® Platinum 8180 CPU @ 2.50GHz (28 cores), HT disabled, turbo disabled, scaling governor set to "performance" via intel_pstate driver, 384GB DDR4-2666 ECC RAM. CentOS Linux release 7.3.1611 (Core), Linux kernel 3.10.0-514.10.2.el7.x86_64. SSD: Intel® SSD DC S3700 Series (800GB, 2.5in SATA 6Gb/s, 25nm, MLC). Performance measured with: Environment variables: KMP_AFFINITY=granularity=fine, compact, OMP_NUM_THREADS=56, CPU Freq set with cpupower frequency-set -d 2.5G -u 3.8G -g performance. Compared with Platform: 2S Intel® Xeon® CPU E5-2699 v3 @ 2.30GHz (18 cores), HT enabled, turbo disabled, scaling governor set to "performance" via intel_pstate driver, 256GB DDR4-2133 ECC RAM. CentOS Linux release 7.3.1611 (Core), Linux kernel 3.10.0-514.el7.x86_64. OS drive: Seagate® Enterprise ST2000NX0253 2 TB 2.5" Internal Hard Drive. Performance measured with: Environment variables: KMP_AFFINITY=granularity=fine, compact, 1,0, OMP_NUM_THREADS=36, CPU Freq set with cpupower frequency-set -d 2.3G -u 2.3G -g performance. Intel Caffe: (<http://github.com/intel/caffe/>), revision b0ef3236528a2c7d2988f249d347d5fdae831236. Inference measured with "caffe time --forward_only" command, training measured with "caffe time" command. For "ConvNet" topologies, dummy dataset was used. For other topologies, data was stored on local storage and cached in memory before training. Topology specs from https://github.com/intel/caffe/tree/master/models/intel_optimized_models (GoogLeNet, AlexNet, and ResNet-50), GCC 4.8.5, MKLML version 2017.0.2.20170110. BVLC-Caffe: <https://github.com/BVLC/caffe>, revision 91b09280f5233caf62954c98ce8bc4c204e7475 (commit date 5/14/2017). BLAS: atlas ver. 3.10.1.

2. Platform: 2S Intel® Xeon® Platinum 8180 CPU @ 2.50GHz (28 cores), HT disabled, turbo disabled, scaling governor set to "performance" via intel_pstate driver, 384GB DDR4-2666 ECC RAM. CentOS Linux release 7.3.1611 (Core), Linux kernel 3.10.0-514.10.2.el7.x86_64. SSD: Intel® SSD DC S3700 Series (800GB, 2.5in SATA 6Gb/s, 25nm, MLC). Performance measured with: Environment variables: KMP_AFFINITY=granularity=fine, compact, OMP_NUM_THREADS=56, CPU Freq set with cpupower frequency-set -d 2.5G -u 3.8G -g performance. Compared with Platform: 2S Intel® Xeon® CPU E5-2699 v4 @ 2.20GHz (22 cores), HT enabled, turbo disabled, scaling governor set to "performance" via acpi-cpufreq driver, 256GB DDR4-2133 ECC RAM. CentOS Linux release 7.3.1611 (Core), Linux kernel 3.10.0-514.10.2.el7.x86_64. SSD: Intel® SSD DC S3500 Series (480GB, 2.5in SATA 6Gb/s, 20nm, MLC). Performance measured with: Environment variables: KMP_AFFINITY=granularity=fine, compact, 1,0, OMP_NUM_THREADS=44, CPU Freq set with cpupower frequency-set -d 2.2G -u 2.2G -g performance. Neon: ZP/MKL_CHWN branch commit id:52bd02acb947a2adabb8a227166a7da5d9123b6d. Dummy data was used. The main.py script was used for benchmarking, in mkl mode. ICC version used: 17.0.3 20170404, Intel MKL small libraries version 2018.0.20170425; Inference and training throughput uses FP32 instructions

Intel® C620 Series Chipset

 NWChem release 6.6. Binary: nwchem_armci-mpi_intel-mpi_mkl with MPI-PR run over MPI-1. Workload: siosi3 and siosi5. Intel MPI 2017.1.132. 2 ranks per node, 1 rank for computation and 1 rank for communication. http://www.nwchem-sw.org/index.php/Main_Page

Intel® Quick Assist Technology (Intel® QAT)

Now integrated directly into the Intel C620 series chipset

- Set of scalable hardware accelerators exposed to IA. More efficient packet processing, and Functions acceleration. Crypto (public and Pvt keys), and Compression (codecs)
 - Server: secure browsing, email, search, big-data analytics (Hadoop), secure multi-tenancy, IPsec, SSL/TLS, OpenSSL
 - Networking: firewall, IDS/IPS, VPN, secure routing, Web proxy, WAN optimization (IP Comp), 3G/4G authentication
 - Storage: real-time data compression, static data compression, secure storage.
- Intel® QAT on Purley offers outstanding capabilities: 100Gbs Crypto, 100Gbs Compression, 100kops RSA , 2k Decrypt
- Technology genesis in the IXP28xx Network Processors; continuously enhanced since then, in every generation

Massively Scalable, Faster³ Memory

DRAM + Intel® Optane™ SSD +
Intel® Memory Drive Technology

All DRAM

Intel® Xeon® Processor
Scalable Family

- Increase memory pool up to **8x¹**
- Displace DRAM up to **10:1** in select workloads²
- **Higher platform** memory & PCIe **bandwidth** with Intel® Scalable Family of Processors³
- Accelerate applications and gain new insights from **larger working sets**

Intel® Optane™ SSD DC P4800X for Storage Builders

SPDK Performance: Platform Comparison

Intel® Xeon® Scalable Processor Platinum Family + Intel® Optane™

- 10X higher throughput
- 10X lower latency
- Up to 27 cores remaining for:
 - Virtual Machines
 - Big Data/Analytics
 - Machine Learning
 - Storage services like erasure coding, deduplication, compression, or encryption.
- Platform offers RDMA
 - Enables NVMe over Fabrics
 - No more trapped I/O capacity

See notices, configurations, disclaimers

Intel® Xeon® Platinum and Intel® Optane™ SSDs for STORAGE infrastructure

- **Intel Optane SSD P4800 Series:**
High performance, low latency storage
- **Intel® Volume Management Device:** Hot-swap of drives with standardized LED management
- **Software tools for optimized storage**
 - Intel® Intelligent Storage Acceleration Library (ISA-L)
 - Intel® Storage Performance Development Kit (SPDK)

2X performance increase¹ generation¹
Vs prior

Business impact

- ✓ Faster data analytics results
- ✓ More complex analyses
- ✓ Deeper data insights

¹ 2x claim based on SAS Business Analytics: SAS 9.4 m4 application running the 30 session SAS Mixed Analytics workload. OS: CentOS 7.2 kernel 3.10.0. Testing by Intel and SAS May 2017. Software and workloads used in performance tests may have been optimized for performance only on Intel microprocessors. Performance tests, such as SYSmark and MobileMark, are measured using specific computer systems, components, software, operations and functions.
